

Nuxeo Video Suite 2.0 by Genus Technologies

Nuxeo Video Suite 2.0 is the most recent release of our flagship Marketplace package, the Nuxeo Video Suite by Genus Technologies.

Focused on enhancing the user experience and providing more control and visibility to video processing, the Nuxeo Video Suite becomes a “must have” for all Nuxeo customers managing video.

ABOUT GENUS TECHNOLOGIES

The strong partnership between Genus Technologies and Hyland Nuxeo, which began in 2018, remains dedicated to consistently providing clients significant value. With a focus on digital transformation, Genus brings over 25 years of expertise, and works directly with Nuxeo customers or collaborates with Hyland’s Professional Services team to deliver transformative Nuxeo solutions.

The Genus Nuxeo Practice consists of exceptional resources, innovative solution accelerators, and a successful engagement track record, aligned with a broader goal of delivering unparalleled value and ROI.

Our team of Nuxeo consultants, technical architects, and implementation specialists have deep knowledge in UX/UI creation, digital product creation (DPC), digital asset management (DAM), legacy ECM migrations, video solutions, and platform upgrades.

Nuxeo Video Suite 2.0 by Genus Technologies

Nuxeo Video Suite 2.0 by Genus Technologies extends and enhances the already powerful Nuxeo Video Suite. Users are still able to enjoy all the capabilities of the original version including: the enhanced Video Player, transcription/translation services, transcript/closed caption viewers, and video streaming. However, new capabilities like Video Services On-Demand, Transcript Search, Chaptering, Thumbnail Presentation, and Transcript Editor have all been added to take the Video Suite to the next level.

Video Services On-Demand

- Nuxeo Video Suite offers integration with industry-leading video processing services including transcription and translation. Processing can be configured to happen automatically at upload or initiated manually at the discretion of a privileged user. Video Suite manages the requests, prevents duplicate submissions, provides status, and delivers notifications. These enhancements provide total control of your video library and processing costs.

Transcript Search

- Nuxeo Video Suite 2.0 adds search to the read along transcript viewer introduced in the original release. The search capability provides users a quick way to find pertinent content within the video transcript using a simple search form. Search terms are highlighted within the transcript and navigation arrows allow a user to move through all occurrences of the term. Selecting the term in the transcript cues the video from that point making video consumption more efficient and enriching.

Chaptering

- The ability to create chapters logically segments the video and further assists users with navigation and locating key locations within the video. Users are presented with a chapter title and keyframe corresponding to the start of the chapter for easier recognition. Jump right to the start of any chapter and begin viewing.

Thumbnail Presentation

- In addition to the traditional storyboard displayed below the video, continuous thumbnails are now displayed when hovering over the scrub bar. It provides the user with a detailed look at the video contents, helping locate the sought after spot in the video using visual cues.

Transcript Editor

- Nuxeo Video Suite 2.0 provides an improved, more intuitive transcript editor. Users can polish transcripts, add transcript entries, capture player time codes, and even add new tracks. Reviewing and managing transcripts just became a whole lot easier.
